NO. OF PAGES 1 REQUIREMENT NO. RD 25X1 ACE ACQUIRED ATE ACQUIRED SOurce Evaluations are definitive. Appraisal Of Content is tentative. Source evaluations are definitive. Appraisal Of Content is tentative. 1. Shortly after World War II, the Soviets built the new Valdemar Bridge over 25X1 the Daugava River in Riga. This bridge was constructed very narrow and very high to permit large ocean-going vessels to pass underneath it. However, the bridge proved to be too narrow for two streetcars to pass and, as a result, the engineer was rumored to have been arrested for sabotage and sentenced to 25 years at hard labor. 2. A new concrete bridge across the Daugava River in Riga was begun in spring 1954. By spring 1955, the abutments on both shores as well as three stanchions had been completed. This new bridge is being constructed on the upstream side of and immediately alongside the old pontoon bridge. It is anticipated that this new bridge will do away with the necessity for the old pontoon bridge. Temporary quarters for workers and the office have been constructed mear the abutment on the right bank of the river, while tool sheds and a large orane are located on the left bank. 3. All bridges in Riga are patrolled. Four members of the militia guarding the pontoon bridge. One guard patrolled along the side of the bridge to the center and back again. No one is permitted to stop on the bridge; however, pedestrians may use the bridge, at least during the daytime.			S-E-C-R-E-T				25
